

The 28th North American Catalysis Society Meeting

June 18 – 23, 2023 ■ Providence, Rhode Island

With @NAM28 coming up soon, we hope you're getting ready to submit those abstracts on Sept. 6!

Check out <https://www.nam28.org/> and this list of ideas for putting together your Extended Abstract.

1. The abstract is 'extended'

Submissions for NAM28 will require an extended abstract, which allows for more information to be included! Having a motivating section, followed by technical details including methods, results and discussion can help highlight your work. To wrap it all up, a small section highlighting the significance of the work can go a long way!

2. Title

Abstract titles that are informative, concise, and to the point, can be highly effective. A good title will readily communicate to a potential attendee what your presentation is all about and attend it. Titles with 12 words or fewer are optimal.

Keywords: Think of what keywords are typically used in your area of catalysis research and think about including them in your title to help others find your talk when searching in the technical program.

3. Accepted abstracts become public

Any extended abstract that is accepted for NAM28 will later become publicly available online as part of the technical program. Make sure that any data and information included is ready for prime time, as well as cleared to be shared publicly by all co-authors.

4. Review your submission

Once an abstract is submitted, and the submission deadline passes, you will not be able to adjust your submission. Make sure to carefully proof-read your submission for typographical errors, missing authors, references, and acknowledgments if applicable.

5. Picking an appropriate area

Be sure to check the various program areas you can submit your abstract to:

<https://www.nam28.org/program/>

Picking a program area aligned with your research topic helps with having your abstract reviewed by relevant experts.
